DECISION PROTOTYPE · A DECISION YOU CAN CLICK THROUGH

A working prototype in a few days.

I sit down with the person who has the requirements in their head and ask questions until it's clear how the service should work. Then I turn that into a working prototype. Your team clicks through it, comments, and moves forward.

STARTING POINT

2 weeks of meetings and nothing to click or test. Everyone agrees in the meeting, but engineering still waits, because the decision lives in people's heads and slide decks.

WHAT YOU GET

A decided scope
What goes into the first version, which flows matter, and why you decided that way.

One link for everyone
A password-protected prototype on the web. Anyone can open it in a browser and comment on any screen.

A handoff for engineering
A screen map, every state, and your real colors and components.

PRICE

From €2,900

excl. VAT

1 customer journey · exact price after our first meeting

1 DAY

1 question

A workshop and a clickable first version.

2 DAYS

1 open question

A workshop, a prototype, and a decision log, resolved end to end.

1 WEEK

An entire product area

More interviews, workshops, and screens, with the same process.

What affects the price Scope · Complexity · Product size

You pay per project, not per hour.

WHY EXTERNAL, AND WHY ME

An outside view
I don't defend any department's budget or system.

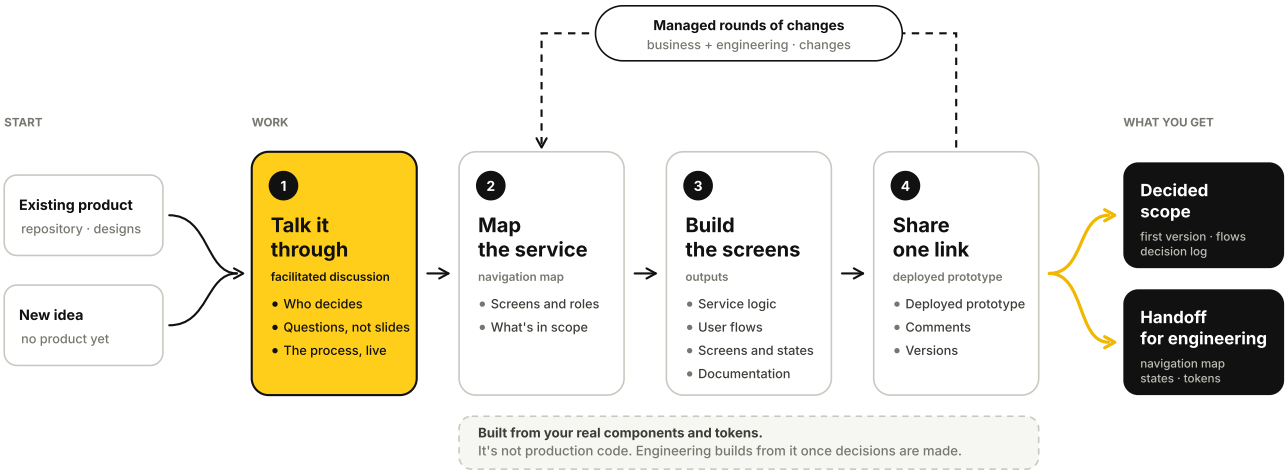

13 years of practice
I've worked in banking, energy, healthcare, and crypto.

Something you can click
You get a prototype, a recording, or a design system, not a diagram for the wall.

Decisions with a record
I write down every decision with its reason.

Prague and Amsterdam

HOW IT WORKS

The round repeats until the decision is made.

WHAT I NEED FROM YOU

The decision-maker
In the workshop. Without them, the decision only gets postponed.

People from the departments
Those who know the product from daily work. I'll ask them.

IT and the architect
They comment on the prototype, screen by screen.

WHAT'S NOT INCLUDED

- Production code. Engineering builds from the prototype after the decision.
- Development and deployment.
- Ongoing product leadership. That's what fractional leadership is for.

QUESTIONS FROM IT

Does it touch our production code?
No. It uses your components, and engineering builds from it only after decisions are made.

Who owns it afterward?
You do. I transfer the repository and the link to you at the end.

What do you need from us?
Mainly time with your decision-makers. Access to your design system helps, if your security policies allow it.

IN PRACTICE

Heirloom · Digital legacy
A change in direction, defined precisely with prototypes on the production repository. Agreed in about 4 sessions.

Coinmate · Regulated crypto exchange
One password-protected link, and the team could test right away. Weeks became days.

NEXT STEP

Write to me. In a 30-minute call, I'll tell you whether I can help.
