APP FACELIFT · BUILT ON A DESIGN SYSTEM

A better app without rewriting the code.

I go through your app, fix what slows users down, and build a design system for it. Engineering applies it to the code you already have, without rewriting components.

RIGHT FOR YOU IF

- the app works, but every screen looks different,
- you're moving to a new version of your UI library and will touch every screen anyway,
- engineering tunes each element again, because there is no shared system.

WHAT YOU GET

A design system for engineering

Colors, type, spacing, and density as tokens. WCAG AA contrast, and dark mode if you want it.

Key screens with every state

Including first launch, empty data, loading, errors, and missing permissions.

Files engineering can apply

A theme, default component settings, and a list of changes. In Figma, or directly in code.

PRICE

From €4,900

excl. VAT

3 to 4 weeks · exact price after I see the app

BASIC
Look and components
Tokens, updated components, and a handoff to engineering.

FULL
Basic plus screens
Adds key screens with their states and the main table.

WITH DARK MODE
2 modes
The full scope in light and dark mode.

What affects the price Number of screens · Custom components outside the library · Dark mode

If you need a UI kit license, you pay for it.

WHY EXTERNAL, AND WHY ME

An outside view

I don't belong to any department and I don't defend a budget or a system. I ask the questions nobody asks internally.

13 years of practice

Banking, energy, healthcare, and crypto. I cut most options that won't pass compliance or engineering before anyone draws them.

Something you can click

A prototype, a recording, or a design system with real content and states, not a diagram for the wall.

Decisions with a record

I write down every decision with its reason, so nobody has to reopen it.

HOW IT WORKS

1
Map of the app
Week 1. I map the screens, components, and states, working in my own branch of your repository.

2
Design system on a link
Week 2. I publish colors, type, density, and components on a password-protected link. Your team can see them and comment.

3
Facelift and tuning
Weeks 3–4. I apply the design system to the app and tune it, in dark mode too if it's in scope. At the end, I hand over the branch and a list of changes.

My work doesn't fill that time. Most of it goes to feedback and approvals on your side.

WHAT I NEED FROM YOU

Access
To the app and the repository, or to Figma.

Answers within 2 days
To questions about screens and components.

A developer in the calls
A short weekly call, and taking over the branch at the end.

WHAT'S NOT INCLUDED

- New features. That's what a Decision Prototype is for.
- Custom components outside the library. I price them separately.
- Merging to production. You decide what to merge and when.

QUESTIONS FROM IT

Do we have to rewrite components?
No. I change the look and default settings of the components in the library you use.

Do we need Figma?
No. I work in Figma or directly in code with live documentation.

Do you use AI?
Yes, my own AI tools, framework, and process. I make the calls on the look and UX. My quote explains which files AI works with.

IN PRACTICE

Coinmate · A design system from scratch

The design system came first, then the new brand. The rebrand launched on October 1, 2026.

Leeaf · One system for 3 products

A website, a portal for doctors, and a mobile app. Other IVF clinics later ran on the same system.

NEXT STEP

Write to me. In a 30-minute call, I'll tell you whether a facelift will help your app.
